```
class fastsemsim.Ontology.AnnotationCorpus.AnnotationCorpus (go)
```

```
    Bases: object
```

```
    class ECFilter (params)
```

```
        EC = {}
```

```
        filter (EC)
```

```
        inclusive = False
```

```
        name = 'EC'
```

```
    class AnnotationCorpus.GOFilter (params=None)
```

```
        GO = None
```

```
        filter (GO)
```

```
        inclusive = True
```

```
        int_go = None
```

```
    name = 'GO'
    set (params)
class AnnotationCorpus.TaxonomyFilter (params)

    filter (taxonomy)
    inclusive = False
    name = 'taxonomy'
    taxonomy = {}
AnnotationCorpus.annotations = {}

This file is part of fastSemSim

fastSemSim is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

fastSemSim is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with fastSemSim. If not, see <http://www.gnu.org/licenses/>.

```
class fastsemsim.Ontology.GAF2AnnotationCorpus.GAF2AnnotationCorpus(ac, parameters=None)
    Bases: object

    int_comment = '!'

    int_interpretParameters ()

    int_separator = '\t'

    isOk ()

    parse (fname)

    setFields ()
```

### **fastsemsim.Ontology.GOAnnotationCorpus module**

Copyright 2011 Marco Mina. All rights reserved.

This file is part of fastSemSim

fastSemSim is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

fastSemSim is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with fastSemSim. If not, see <http://www.gnu.org/licenses/>.

```
class fastsemsim.Ontology.GOAnnotationCorpus.GOAnnotationCorpus (go=None)
```

```
    class ECFilter (params)
```

```
        EC = {}
```

```
        filter (EC)
```

```
        inclusive = False
```

```
        name = 'EC'
```

```
class GOAnnotationCorpus.GOFilter (params=None)
```

```
    GO = None
```

```
    filter (GO)
```

```
    inclusive = True
```

```
    int_go = None
```

```
    name = 'GO'
```

```
    set (params)
```

```
class GOAnnotationCorpus.TaxonomyFilter (params)
```

```
    filter (taxonomy)
```

```
    inclusive = False
```

```
    name = 'taxonomy'
```

```
    taxonomy = {}
```

```
GOAnnotationCorpus.constrain ()
```

```
GOAnnotationCorpus.initCommonFilter ()
```

```
GOAnnotationCorpus.int_checkConsistency ()
```

```
GOAnnotationCorpus.int_exclude_GO_root = True
```

```
GOAnnotationCorpus.int_resetFields ()
```

```
GOAnnotationCorpus.isConsistent ()
```

```
GOAnnotationCorpus.isOk (field, value)
```

```
GOAnnotationCorpus.load (fname, ftype, params={})
```

```
GOAnnotationCorpus.parse (fname, ftype, params={})
```

```
GOAnnotationCorpus.reset ()
```

```
GOAnnotationCorpus.resetCommonfilter (i)
```

```
GOAnnotationCorpus.resetFilter (field)
```

```
GOAnnotationCorpus.sanitize ()
```

```
GOAnnotationCorpus.setCommonfilters (inf)
```

`GOAnnotationCorpus.setFilter` (*field, selector*)

## **fastsemsim.Ontology.GeneOntology module**

Copyright 2011-2013 Marco Mina. All rights reserved.

This file is part of fastSemSim

fastSemSim is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

fastSemSim is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with fastSemSim. If not, see <http://www.gnu.org/licenses/>.

@mail [marco.mina.85@gmail.com](mailto:marco.mina.85@gmail.com) @version 2.0 @desc GeneOntology class: extend Ontology to handle the GeneOntology

**class** fastsemsim.Ontology.GeneOntology.**GeneOntology** (*terms, edges, parameters*)

Bases: fastsemsim.Ontology.Ontology.Ontology

## **fastsemsim.Ontology.Ontology module**

Supported ontologies are those representable as multirooted DAGs. It is not required DAGs to be disconnected, but 'inter-DAG' edges are required to be specified. Class Ontology provides a function `is_consistent` that checks whether this constraints is satisfied. Inconsistent DAGs are NOT currently usable.

Different datastructures can be used to represent ontologies. The section Variables lists a set of different alternatives. Currently Ontology is tuned for using a parent-children and a node-edge representation.

Superclasses can extend the basic datastructure with additional layers of information.

**class** fastsemsim.Ontology.Ontology.**Ontology** (*terms, edges, parameters=None*)

Bases: object

Base class for the representation of an ontology. It currently supports any multi-rooted DAG (Directed Acyclic Graph).

**debug** = False

**det\_roots** ()

**edge\_number** ()

**gen\_error** = False

**id2node** (*codes, alt\_check=True*)

**is\_consistent** ()

**is\_valid** (*term*)

**name2node** (*codes*)

**node2id** (*codes, alt\_check=False*)

**node\_number** ()

## fastsemsim.Ontology.PlainAnnotationCorpus module

Copyright 2011 Marco Mina. All rights reserved.

This file is part of fastSemSim

fastSemSim is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

fastSemSim is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with fastSemSim. If not, see <http://www.gnu.org/licenses/>.

```
class fastsemsim.Ontology.PlainAnnotationCorpus.PlainAnnotationCorpus (ac,
                                                                    parameters=None)

    Bases: object

    int_interpretParameters ()

    isOk ()

    parse (fname)

    setFields ()
```

## fastsemsim.Ontology.ontologies module

Current implementation can only handle single-scope ontologies.

```
class fastsemsim.Ontology.ontologies.OboParser (ontology_class, parameters={})

    alt_id_tag = 'alt_id'

    comment_tag = '!'

    consider_tag = 'consider'

    def_tag = 'def'

    delimiter_tag = ':'

    find_next_term ()

    has_tag_structure (st)

    id_tag = 'id'

    is_a_tag = 'is_a'

    is_obsolete_tag = 'is_obsolete'

    name_tag = 'name'

    namespace_tag = 'namespace'

    parse (_handle)

    relationship_delimiter_tag = ' '

    relationship_tag = 'relationship'
```

```
replaced_by_tag = 'replaced_by'
split_rel_tag (st)
split_tag (st)
term_tag = '[Term]'
typedef_tag = '[Typedef]'
class fastsemsim.Ontology.ontologies.OboXmlParser (ontology_class, parameters={})
    Bases: xml.sax.handler.ContentHandler
    alt_id_tag = 'alt_id'
    characters (ch)
    comment_tag = '!'
    consider_tag = 'consider'
    def_tag = 'def'
    delimiter_tag = ':'
    endElement (name)
    id_tag = 'id'
    is_a_tag = 'is_a'
    is_obsolete_tag = 'is_obsolete'
    name_tag = 'name'
    namespace_tag = 'namespace'
    part_of_tag = 'part_of'
    relationship_delimiter_tag = ' '
    relationship_tag = 'relationship'
    relationship_to_tag = 'to'
    relationship_type_tag = 'type'
    replaced_by_tag = 'replaced_by'
    startElement (name, attrs)
    term_tag = 'term'
fastsemsim.Ontology.ontologies.load (source=None, source_type='obo', ontol-
                                     ogy_type='GeneOntology', parameters={})
fastsemsim.Ontology.ontologies.parse (source=None, source_type='obo', ontol-
                                      ogy_type='GeneOntology', parameters={})
```

```

## fastsemsim.SemSim.TermSemSim module

TermSemSim class

This class provides the prototype for a generic Term Semantic Similarity measure (TSS)

There are two types of Term Sem Sim: those which evaluate the semantic similarity between two sets of terms (groupwise - G\_TSS), and those which can only evaluate the similarity between pairs of GO terms (pairwise - P\_TSS). Each class extending TermSemSim should declare whether it is groupwise or pairwise.

TermSemSim relies on SemSimUtils to perform a lot of tasks (such as evaluating Term IC or common ancestors) a SemSimUtils object can be passed to the constructor as input data. Otherwise, a new instance will be created. Using only one copy of SemSimUtils helps reducing time and spece requirements and is strongly adviced.

```

exception fastsemsim.SemSim.TermSemSim.MissingAcException(message)
    Bases: exceptions.Exception

```

```

class fastsemsim.SemSim.TermSemSim.TermSemSim(ontology,      ac=None,      util=None,
                                                do_log=False)
    Bases: object
    G_TSS = 'Groupwise'
    IC_based = None
    P_TSS = 'Pairwise'
    SS_type = None
    SemSim(term1, term2, ontology=None)

```

```

```
fastsemsim.fastsemsim_cmdline.build_cmdline_args_parser()
    Build a cmdline arg parser

fastsemsim.fastsemsim_cmdline.check_parameters()
    Check whether the set of parameters is formally correct to run a query

fastsemsim.fastsemsim_cmdline.det_ss()
    Determine SS

fastsemsim.fastsemsim_cmdline.init_parameters()
    Initialize parameters

fastsemsim.fastsemsim_cmdline.init_ss()
    Initialize SS class

fastsemsim.fastsemsim_cmdline.load_IC_from_file(list_file, separator='\t')

fastsemsim.fastsemsim_cmdline.load_ac()
    Load the Annotation Corpus

fastsemsim.fastsemsim_cmdline.load_ontology()
    Load ontology

fastsemsim.fastsemsim_cmdline.load_params_from_file(list_file)
    Load parameters from file

fastsemsim.fastsemsim_cmdline.load_query()
    Load the query

fastsemsim.fastsemsim_cmdline.load_query_from_file()
    Load query from a file

fastsemsim.fastsemsim_cmdline.prbool(string)
    Parse boolean parameters

fastsemsim.fastsemsim_cmdline.print_IC(IC, out, cut_thres=None, cut_nan=False)

fastsemsim.fastsemsim_cmdline.print_err(*args)
```

```
fastsemsim.fastsemsim_cmdline.print_parameters()  
    Print the parameters selected  
fastsemsim.fastsemsim_cmdline.save_params_to_file(list_file)  
    Save parameters to file  
fastsemsim.fastsemsim_cmdline.set_parameters(args)  
    fill the parameter dictionary with the proper parameters  
fastsemsim.fastsemsim_cmdline.ss_pairs(out)  
    Pairwise Semantic Similarity  
fastsemsim.fastsemsim_cmdline.ss_pairwise(out)  
fastsemsim.fastsemsim_cmdline.start()  
    main routine
```
